

Petting Zoo Reflection

I enjoyed doing this project since my group was able to have a lot of fun with our animal. Although the monkey may be missing an arm or have strange eyes, I think that our monkey came together and it makes me smile whenever I see it. One of our challenges was when I cut our micro bits cords. When I was cutting and gluing down the felt for our monkey's skin, I accidentally cut the cords of our micro bit. At first, my solution was to solder the wires back together. After a few minutes of doing that, we decided to instead install a new micro bit and start from scratch. After going through the steps a second time, we were able to have a working microbit and the movement of our monkey's bottom lip, opening and

closing his mouth. The [coding](#) seemed fairly simple and our group was able to complete the coding pretty well.
